

## Custom ECU

**Custom ECUs** are Model-Based Development (MBD) platforms with reliable hardware provided to OEMs which allow them an ease of development of robust and reliable designs with greater flexibility to develop their own applications. Through these platforms, SEDEMAC empowers the OEMs to execute their projects faster with a custom, production-ready, embedded (hardware + base software) solution, with an option to own and control the application specific software component (developed with Simulink / Target Link models). SEDEMAC offers Custom ECUs for complete product lifecycle- from product development to large volume supply.
